Safety precautions

- Dispose of any plastic bags and foam from packaging and do not allow children to play with it.
- The table is only intended for interior use.
- Handle brass/marble table top with care as brass may bend and get scratched, where as marble may break. Please note that marble is very heavy.
- Spilled liquids of any kind should be removed immediately from the table top as it may penetrate the surface treatment and cause damage to it.

Cleaning instructions

The Palette table is made from powder coated steel, ash or walnut veener, polished marble and brushed brass. Never use agressive or abrasive cleaning detergents for any parts of the table, as this will cause irreparable damage.

Wooden table top

Dust table top with a soft cloth. Clean table top with a soft cloth wrung in a solution of water and universal cleaning detergent following the wood grains and dry immediately with a soft cloth,again following the wood grains.Avoid use of abrasive cleaning products such as steel wool or polish. Avoid placing lacquered and stained wood in excessive humidity or heat.

Marble plate

The marble plate is made from natural marble and will therefore have variations in structure and colour. This should not be considered a defect nor a valid reason for claims. The marble is treated with sealer, but it is strongly recommended to use a trivet and never place glasses or cups with liquids directly on to the marble. Spilled liquids will leave permanent stains due to the natural sensitivity of marble. For daily cleaning of the marble top it is recommended to use a cleaning agent specifically developed for stone or marble. It is also highly recommended to do a re-sealing of the marble every second month, using an ap propriate sealer developed specifically for stone or marble.

Brass plate

The brass plate is a alloy of copper and zinc, with a very fine grid brushed surface, and coating of Renaissance Wax.
The Renaissance Wax provides a barrier to slow ageing and oxidisation, but over time the table will develop a unique and beautiful patina, this is a natural and beautiful part of the life of the brass product.

Handling and use of the table will over time penetrate the protetive wax barrier, and the oils in our skin will then cause the table to oxidise more quickly highliting fingerprints and other wear.

To maintain the wax barrier over time, we recommend occasionally reapplying Renaissance Wax.

Being brass and therefore a natural product, the plate is still sensitive to liquids and it is strongly recommended to use a trivet and never place glasses or cups with liquids directly on to the brass plate. Spilled liquids may leave permanent stains.

To ensure the brass will look beautiful for years to come, please brush the bras plates with a fine grit abrasive brushing pad such as a the 3M Scotch-Brite™ Hand Pad 7447.
It is very important to always wipe in the direction of the grain of the brushed surface.

After brushing, use a non-aggressive, multipurpose cleaning solvent such as CT1 Multi-Solve, to degrease the product. Apply this with a clean soft cloth following the grain direction.

Once the brass has been cleaned, reapply Renaissance Wax to the entire surface, following the manufacturer's instructions, again in the direction of the grain of the brushed surface.

Do NOT use ammonia, products containing ammonia, or any other corrosive cleaning solutions as this can damage the brass.
